

Case Study

Company profile

Snarum Gartneri is a Norwegian herbs producer located right outside of Oslo. They are one of the biggest producers of fresh herbs in Norway.

“

“We have used the Agro-Pure since we started our production here in the early 90`s, and for us, it is the main protection against contamination and pests in our production.”

Hans Erik Fuglerud - Snarum Gartneri

Introduction

Snarum Gartneri is a Norwegian herbs producer located right outside of Oslo. They have been producing herbs since the early 90-s and have since the start used the Agro-Pure to reduce the contamination risk in their production.

Challenges

Reducing the risk of contamination in production

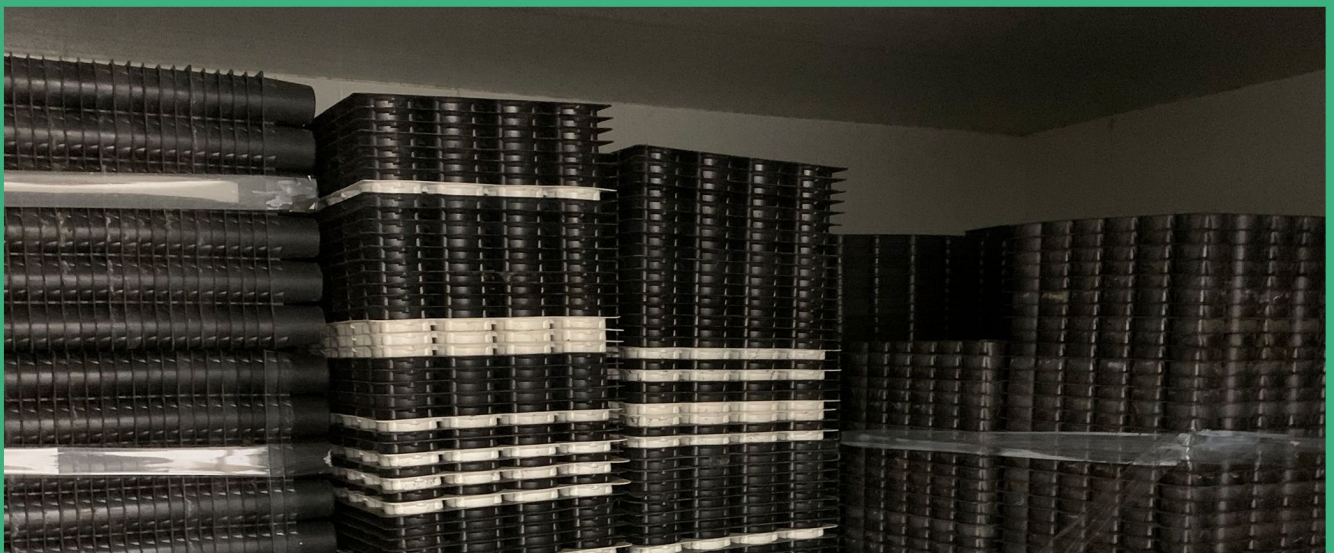

Sterilizing production equipment in a cost-effective way

Limiting the use of chemicals in the production

Product used

Snarum uses the integrated version of the Agro-Pure system that was built in 1995. The same sterilization technology used in that integrated system is also used in the Agro-Pure model in the 20- or 40-foot container that we currently offer for sale.

Our Solution

The Agro-Pure is an automated sterilization system that ensures that the producer can eradicate any unwanted pests or diseases on his equipment. Through heat treatment using water vapor, the producer gets a system that is chemical-free and guarantees that all his equipment has gotten the same treatment.

Results

As a result of using the Agro-Pure, Snarum Gartneri is experiencing several different advantages in their production.

- Fully eliminated use of chemicals
- Little to no Pythium infections
- Less contamination
- On-site sterilization without having to consult external company
- Reuse of equipment and thus saving costs

For more information on the Agro-Pure product, please visit the product page on our website or contact our sales department.
